

100m fiber optic cable speed is slow after passing through a router

Overview

Restarting your router is one of the easiest ways to resolve minor internet speed issues. Often, these devices just need a fresh reboot to clear out temporary glitches and restore your connection to full speed. Wait for about 60 seconds to make sure it. Fiber optic networks are celebrated for their speed and reliability, but even the best systems can encounter problems. Fiber optic internet promises blazing-fast speeds, transforming online experiences from frustratingly slow to seamlessly smooth. But what. I was expecting dl speeds of 900+ on wired connection and 600+ on wifi when close to router, what I am getting is 100 (dl) on wired and max of 350mb on wifi when sitting on top of the router, other rooms in my apartment are getting 50-200~ on the wifi network.
