

200 reduced to 100 cable tray

AI Overview

A 200mm wide cable tray can be reduced to 100mm using a cable tray reducer designed for light, medium, or heavy-duty systems.

Cable Tray Reducers

Cable tray reducers are specialized fittings that allow a transition from a larger tray width to a smaller one, such as from 200mm to 100mm. They are available for light, medium, and heavy-duty trays and can accommodate widths ranging from 50mm to 900mm. Reducers are typically made from mild steel (pre-galvanized or hot-dip galvanized) or stainless steel (grade 316L), depending on environmental and corrosion requirements. Both left-hand and right-hand reducers are available, allowing flexibility in installation direction.

Installation Considerations

- **Compatibility:** Ensure the reducer matches the type of tray (ladder, perforated, or wire mesh) and the load rating of the existing system.
- **Covers:** Closed or ventilated covers can be used with reducers to maintain cable protection and airflow.
- **Custom Orders:** Many manufacturers can produce reducers to order if standard sizes do not meet your requirements.
- **Support and Alignment:** Proper support must be maintained during the transition to prevent sagging or misalignment, especially for heavy-duty trays.
