

90-degree downhill bridge

AI Overview

The Aishbagh rail-over bridge in Bhopal features a sharp 90-degree turn, sparking safety concerns and administrative action.

Overview

The bridge is located in the Aishbagh area of Bhopal, Madhya Pradesh, India, and was constructed over railway tracks. Its design includes a nearly 90-degree turn, which has drawn widespread criticism from locals and social media users due to safety concerns and the difficulty vehicles face navigating the sharp bend .

Design Challenges

Officials have explained that the unusual 90-degree turn was necessitated by land constraints and the proximity of a metro station, which limited the available space for a more gradual curve . The bridge design underwent three major revisions since 2018, with the final plan approved in 2023 . Despite these adjustments, the sharp angle remained, making it a rare and controversial engineering choice.

Safety and Administrative Actions

The bridge has been criticized for its potential danger, and the Madhya Pradesh government suspended seven of the eight engineers involved in the project, including chief engineers and executive engineers, while a retired superintendent engineer faces a departmental inquiry . Additionally, the architecture and design firms were blacklisted, and a committee was formed to implement necessary impro...
