

AB type lighting distribution box

AI Overview

An AB type lighting distribution box is a modular electrical enclosure designed to safely distribute power to lighting circuits, typically made from flame-retardant ABS or UV-resistant materials.

Overview

AB type lighting distribution boxes, also referred to as ABS or ABC distribution boxes, are used to manage and distribute electrical power to multiple lighting circuits in residential, commercial, or industrial settings . They are modular in design, allowing flexibility in configuration and easy installation of incoming and outgoing devices such as MCBs, MCCBs, RCDs, and busbars .

Construction and Materials

- **Material:** Most AB type boxes are made from ABS flame-proof plastic (UL V-0 rated) or UV-resistant materials for outdoor applications .
- **Safety Features:** They provide excellent insulation, flame resistance, and impulse protection, and often include shrouded busbars and terminals to prevent accidental contact .
- **Modularity:** The boxes are designed to accommodate various sizes and numbers of modules, typically ranging from 8 to 46 modules, with adjustable mounting studs and removable gland plates for easy wiring .
