

AOC Active Optical Cable Bestseller

AI Overview

Active Optical Cables (AOCs) are top-selling high-speed fiber-optic cables ideal for data centers, HPC, and high-definition video applications due to their long reach, low power consumption, and reliable performance.

Overview of AOCs

Active Optical Cables integrate fiber-optic transceivers directly into the cable, allowing high-speed data transmission over longer distances than traditional copper cables. Unlike passive copper cables, AOCs are immune to electromagnetic interference (EMI) and maintain signal integrity over distances up to 100 meters or more, depending on the application. They are plug-and-play, eliminating the need for separate transceivers, which simplifies installation and reduces costs.

Key Advantages

- **High Bandwidth & Speed:** Supports standards like HDMI 2.1, DisplayPort 2.0, USB4, InfiniBand, and data rates from 12G to 400G. Ideal for 4K/8K video streaming, enterprise networks, and HPC.
- **Long Distance Transmission:** Can reliably transmit data over distances far exceeding copper cables, up to 500 meters in some fiber-optic HDMI applications.
- **Low Power Consumption:** Efficient design reduces operational costs in data centers.
- **Lightweight & Flexible:** Easier to manage in high-density environments compared to bulky copper cables.
- **Reliability:** High-quality materials and integrated optical modules ensure durability.
