

Adapter SC Function

Overview

The SC fiber optic adapter is one of the most widely used types in FTTH and telecom networks. It is designed to connect SC connectors using a push-pull mechanism, providing a secure and reliable connection. They are simple, reliable, and suitable for a wide range of optical communication systems, including telecom networks, data centers, LANs, CATV systems, and fiber distribution. If you work with single-mode optical networks—FTTH, PON, CATV, 5G fronthaul—you will run into the SC/APC fiber optic adapter (sometimes called an SC/APC coupler) almost immediately. This device connects two optical fibers securely. It ensures optimal transmission efficiency by minimizing signal loss. The design often features a plastic body with ceramic or metal sleeves. With the big form ferrule, this connector ensures a reliable optical. Corning's 728 series and 740 series of SC (subscriber connector) connectors and adapters offer superior performance with high repeatability. Fully intermateable with standard NTT SC, these products deliver long-term stability for a range of applications and conditions.
