

Are fiber optic flange couplers made of copper

Overview

The precision mating is done through alignment sleeves, which are made of either ceramic or metal such as copper in order to provide rigid support for the fiber optic connectors, whereas the body of the connector itself is made of plastic. L-com stocks a wide range of fiber optic couplers and adapters. Fiber optic's advantages over copper cabling are well known immunity to EMI and RFI, low attenuation over long distances, high bandwidth capacity, smaller size and lower weight. It functions by dividing a single incoming light path into multiple outgoing paths, or by combining light from several input paths into a single output fiber. The FOA-FCMM1-MCUQ has FC connectors for simplex multimode fiber. Definition: A device for detachable (movable) connection between an optical fiber and an optical fiber.
