

Are there any IP conflicts with industrial switches

AI Overview

Yes, IP conflicts can occur in industrial networks, including those involving industrial switches, and they can disrupt communication, cause devices to go offline, and impact production.

Causes of IP Conflicts in Industrial Networks

IP conflicts in industrial environments typically arise when two devices are assigned the same IP address. Common causes include:

- Duplicate Manual Configuration: Devices like PLCs, HMIs, or industrial PCs may be manually assigned the same IP address without proper documentation, leading to conflicts .
- DHCP Misconfiguration: If a DHCP server assigns an IP that overlaps with a statically configured device, conflicts can occur .
- Device Replacement or Cloning: Reusing old device configurations or duplicating network settings across multiple machines can result in identical IP addresses .
- Industrial Router Misconfiguration: Connecting networks with overlapping IP ranges can create conflicts if network segmentation is not properly configured .

Symptoms of IP Conflicts

IP conflicts can manifest in several ways:...
