

Armored Indoor Fiber Optic Patch Cord

AI Overview

Armored indoor fiber optic patch cords are high-durability cables designed to protect optical fibers from mechanical stress while maintaining flexibility and reliable signal transmission.

Overview

An armored fiber optic patch cord is a specialized cable that combines standard fiber optic transmission with a protective armor layer, making it suitable for environments where cables may be exposed to bending, crushing, or accidental damage. These cords are commonly used in data centers, industrial facilities, and high-density network installations where both performance and durability are critical .

Construction and Features

- **Armor Layer:** Typically made of stainless steel or aramid fiber (Kevlar), the armor provides resistance to crushing, rodent damage, and abrasion while maintaining flexibility for indoor routing .
- **Fiber Types:** Available in singlemode (OS1/OS2, G.652D, G.657A1/A2) and multimode (OM1-OM5) configurations to support various network speeds and distances .
- **Connectors:** Common connector types include LC, SC, APC, and MPO/MTP, with high-precision polishing (e.g., APC 8° bevel) to reduce insertion loss and reflection .
- **Durability:** Armored cords can withstand tensile stress, compression, and kinking, often rated up to IP67 for protection against dust and moisture .
- **Bend Radius:** Designed for tight spaces, these cords maintain performance even...
