

Automatic Binding Method for High-Altitude Optical Cables

AI Overview

High-altitude optical cables can be efficiently and safely bound using automatic cable tying machines, which replace traditional manual methods with remote-controlled, intelligent systems.

Overview of Automatic Binding Machines

Automatic cable tying machines are hand-held, climb-free tools designed for high-altitude operations in communication engineering. They integrate an intelligent control module that automatically completes all steps of cable tying, eliminating the need for manual hanging or binding of cables. These machines are suitable for galvanized or coated iron wires and can handle a bundling range of 0–60 mm.

Key Components

- **Main Device:** The core unit that houses the control system and mechanical components for tying cables.
- **Special Wire Disc:** Holds the wire used for binding, typically 0.8 mm in diameter, with lengths up to 110 meters per reel.
- **Battery:** Rechargeable lithium battery (12V, 7800 mAh) capable of performing over 1600 bindings per full charge, covering approximately 3 kilometers of cable.
- **Remote Control Switch:** Wireless operation up to 25 meters, allowing a single operator to control the machine safely from a distance.
- **Hand-Held Pole:** Insulated 10 kV glass epoxy rod, modular up to 10 meters, enabling safe high-altitude operation without ladders or scaffolding ...
