

Belgian ladder-type cable tray specifications

AI Overview

Belgian ladder cable trays are primarily manufactured according to IEC 61537 standards, ensuring compliance with European and international safety, load, and installation requirements.

Overview of Standards

In Belgium, cable ladder systems are typically designed and installed following IEC 61537:2023, which specifies requirements and tests for cable tray and ladder systems used to support and accommodate electrical and communication cables . This standard covers aspects such as mechanical strength, corrosion resistance, and safe load capacities, and it applies to both metal and nonmetallic systems. Belgian manufacturers, such as Trayco, produce cable ladders in compliance with these standards, offering products in sendzimir and Ultra Galva finishes for corrosion protection .

Key Requirements

- **Mechanical Strength and Load Capacity:** Cable ladders must support the weight of installed cables, imposed loads, and environmental factors like wind, ice, or snow. For example, some Belgian systems can carry up to 1 ton over spans of 9 meters .
- **Material and Corrosion Resistance:** Materials must meet corrosion resistance standards, often using galvanization or other protective coatings to ensure durability in industrial environments
