

Bolivia General Optical Cable Specifications

AI Overview

In Bolivia, general optical cables typically include monomode fibers, dielectric or reinforced designs, and comply with international fire and mechanical standards.

Common Specifications

Fiber Type and Count: Most general optical cables in Bolivia use monomode fibers (G657), commonly in 2-fiber configurations for indoor applications . **Construction:** Cables often feature a central loose tube design, with aramid yarns as tensile strength elements. The outer jacket is typically halogen-free, flame-retardant thermoplastic, ensuring safety in indoor installations . **Diameter and Flexibility:** Indoor dielectric cables are usually around 4.2 mm in diameter, allowing easy routing in conduits and cable trays . **Fire and Safety Ratings:** Compliance with UNE-EN 50575 standards is common, with fire reaction classes such as Dca-s2,d2,a2, indicating low smoke emission, limited flaming droplets, and minimal acidity . **Standards Compliance:** Cables adhere to EN 60794 for optical fiber cables, ensuring mechanical and environmental performance suitable for telecommunications installations . **Market and Suppliers:** Bolivia's optical cable market includes both domestic and imported products. General Cable (Prysmian) is a notable supplier, offering a wide range of cables for energy, telecom, and data transmission applications, with a focus on safety, efficiency, and sustainability . **Pricing and Maintenance:** Typical maintenance costs for indoor dielectric cables are low, with a decennial maintenance estimate of around 0.80 Bs per meter for standard installations . **Export and Trade Trends:** Bolivia exports optical fiber cables primarily to Peru and Venezuela, with th...
