

Broadband fiber distribution box installed at home

AI Overview

A broadband fiber distribution box (home distribution box) is the central hub where your fiber internet enters your home and connects to your internal network, including the Optical Network Terminal (ONT) and Ethernet cabling.

What the Home Distribution Box Does

The home distribution box serves as the main point where the fiber feeder terminates inside your home. It organizes and distributes the fiber connection to various devices and Ethernet outlets throughout the house. It typically houses the Optical Network Terminal (ONT), which converts the fiber optic signal into electrical signals usable by your router and other network devices .

Placement and Power Requirements

- The box should be installed in an accessible location, usually at eye level in a garage, utility room, or near the main entertainment hub .
- Ensure at least two power outlets are nearby to power the ONT and any backup devices such as UPS or surge protection .
- The box may also accommodate other network equipment provided by your ISP, depending on your home setup .
