

Brunei Local Power Distribution Box

AI Overview

Power distribution boxes in Brunei are managed by the Department of Electrical Services (DES) and are distributed across all districts, but exact locations are not publicly disclosed for safety reasons.

Overview of Brunei's Distribution Network

The Department of Electrical Services (DES) is responsible for the generation, transmission, and distribution of electricity throughout Brunei, covering all districts including Temburong, Belait, Tutong, and Brunei-Muara . DES operates a network that distributes electricity at multiple voltage levels: 66 kV, 11 kV, 415 V, and 240 V, ensuring supply to residential, commercial, and government facilities . The distribution network includes power distribution boxes (also called distribution substations or panels) that step down voltage and route electricity to end users.

Distribution Box Placement

- **District Coverage:** DES supervises the entire country, with distribution boxes strategically placed along transmission lines and within neighborhoods to provide reliable electricity .
- **Voltage Levels:** High-voltage transmission lines (up to 66 kV) feed into distribution boxes, which then supply lower voltages (11 kV, 415 V, 240 V) to homes and businesses .
- **Power Stations:** DES operates four main power stations—Gadong 1 and 2, Bukit Panggal, and Lumut—which feed into the distribution network
