

Cable tray shared support

AI Overview

Shared support solutions allow multiple cable trays to be mounted on a single support structure, optimizing space, reducing material use, and ensuring safe, compliant installations.

Overview of Shared Support Systems

A cable tray shared support solution is designed to hold multiple cable trays on a single structural element, such as a wall bracket, ceiling suspension, or rooftop frame. These systems are widely used in industrial, commercial, and data center environments to efficiently route and organize cables while minimizing the number of support points required .

Key Components

- **Support Elements:** These include wall brackets, suspended supports, and center suspensions that carry the weight of multiple trays and connect them to the building structure .
- **Cable Trays:** Can be ladder, solid-bottom, or mesh types, arranged in tiers or side-by-side on the shared support .
- **Fittings and Accessories:** Horizontal and vertical bends, T-pieces, crossovers, and end closures allow flexible routing and alignment of multiple trays .
- **Mounting Hardware:** Bolts, clamps, and pre-galvanized or stainless steel brackets ensure secure attachment and corrosion resistance .
