

Cable tray with shielded cable duct

AI Overview

Cable trays with shielded cable ducts provide organized, safe, and efficient routing for power, control, and data cables while protecting them from mechanical damage and electromagnetic interference.

Overview

Cable trays are structural systems designed to support and route electrical and communication cables. When dealing with shielded cables, which are sensitive to electromagnetic interference (EMI), it is important to select trays that maintain cable integrity and allow proper grounding. Shielded cable ducts can be integrated into perforated, mesh, or solid cable trays to provide additional protection and separation from other electrical lines .

Types of Cable Trays Suitable for Shielded Cables

- **Perforated Cable Trays:** These trays feature dense perforations for ventilation, preventing heat buildup in shielded cables while maintaining mechanical protection. They are lightweight, durable, and compliant with IEC61537 standards, making them suitable for control and power cable routing .
- **Mesh or Wire Cable Trays:** Open-structure trays allow easy installation, inspection, and maintenance. They are ideal for data centers, server rooms, and industrial automation environments. Stainless steel mesh trays resist corrosion and are easy to clean, which is beneficial in hygienic or industrial settings .
- **Solid or Covered Trays:** For environments requiring maximum EMI shielding, solid or covered trays can be used to enclose shielded cables fully, reducing interference fr...
