

Can cable trays be placed perpendicular to the wall

AI Overview

Yes, cable trays can be installed perpendicular to a wall, including in vertical orientations, provided they are properly supported and secured.

Vertical and Perpendicular Installation

Cable trays are designed to support electrical, power, signal, and communication cables, and they can be installed both horizontally and vertically, including perpendicular to walls. Vertical installations are common in industrial and commercial settings, and properly secured trays maintain their integrity over decades. The percent fill and cable management requirements are the same for vertical and horizontal trays, so there is no difference in allowable cable capacity.

Support and Mounting Considerations

When installing cable trays perpendicular to a wall, it is essential to ensure that the tray is adequately supported. Supports should be attached to structural members without cutting them and spaced according to the tray manufacturer's recommendations, typically every 4 to 6 feet for horizontal runs, with similar considerations for vertical runs to prevent sagging or stress on the cables. Use appropriate hardware such as bolts, clamps, or brackets to secure the tray firmly to the wall or structural frame.
