

Can fiber optic patch cords be connected to optical switch

Overview

The patch cord connectors allow fiber optic patch cord to be rapidly connected to an optical switch, the fiber optic network telecommunications, computer device or other fiber optic equipment. Fiber provides: Increased internet signal bandwidth. ZION Communication supplies both standard patch cords and custom assemblies to match your equipment, distance, and installation. In today's high-performance networks, fiber optic patch cables are the lifelines that ensure smooth data flow across switches, servers, and routers. Even the most advanced optical transceivers can only perform at their peak when paired with properly installed, clean, and precisely managed fiber. SFP transceiver modules are specific to the type of fiber being connected (either single mode or multimode). SFP transceiver modules almost always require two fiber optic cable strands.
