

Classification of Optical Distribution Boxes

AI Overview

Optical distribution boxes are classified based on installation method, material, connection mode, and functional design to suit various fiber optic network requirements.

Classification by Installation Method

- **Rack-Mounted Distribution Boxes:** Designed for standard 19-inch equipment racks, these boxes are typically used in data centers or telecommunication rooms. They manage high-density fiber connections and are available in 12, 24, 36, 48, and 96-port configurations. The enclosures are usually made of cold-rolled steel with electrostatic spraying, and they support SC, LC, FC, or ST adapters .
- **Wall-Mounted Distribution Boxes:** Compact units installed on walls, suitable for indoor environments with limited space. They provide easy access for maintenance and upgrades and are commonly used in residential or commercial FTTH deployments .
- **Pole-Mounted Distribution Boxes:** Designed for outdoor installations on utility poles, offering protection against environmental factors such as rain, dust, and temperature variations .

Classification by Material

- **ABS Plastic Shell:** Lightweight, corrosion-resistant, and suitable for indoor or moderate outdoor conditions .
- **Metal Shell:** Provides enhanced mechanical protection and durability, often used i...
