

Common Electroplated Zinc Cable Trays

AI Overview

Electroplated zinc cable trays offer durable, corrosion-resistant solutions for organizing and routing cables in industrial, commercial, and data center environments.

Key Features

Material and Finish: Electroplated zinc cable trays are made from steel with an electro-zinc plated finish, providing excellent protection against weather, chemical corrosion, and long-term wear, making them suitable for indoor and outdoor installations (L-Com, NavePoint, Marco) . **Design and Structure:** Most trays are wire mesh designs, which allow for airflow around cables, reducing heat buildup and making it easier to inspect and maintain cabling. They are lightweight yet strong, supporting a large number of cables while remaining easy to handle and install (Cablofil, Marco) . **Dimensions and Capacity:**

- L-Com trays: 7.88" W x 1.97" D, supporting up to 190 cables .
- NavePoint trays: 5.91" W x 1.97" D, supporting up to 140 cables .
- Marco MC55100: 55 x 100 mm, 3 m length, lightweight and cost-effective .

Installation Flexibility: Electroplated zinc trays can be mounted along walls, ceilings, or under raised flooring. They can be cut or bent to custom lengths and configurations, and a wide range of accessories is available for secure installation and routing (Quest Manufacturing, L-Com, Cablofil) . **Durability and Maintenance:** The electro-zinc plating ensures long-term durability, resistance to corrosion, and a professional appearance. Wire mesh construction allows for easy cable management, cleaning, and modifications without compromising structural integrity (NavePoint, Q...
