

Compact Fiber Optic Distribution Frame

AI Overview

A Compact Fiber Optic Distribution Frame (ODF) is a space-efficient enclosure designed to terminate, distribute, and protect fiber optic cables while enabling organized cable management and easy maintenance.

Overview

A Compact ODF serves as a centralized hub for fiber optic connections, providing termination, splicing, and patching points in a structured and protected environment . It is particularly suited for environments with limited space, such as small data centers, telecom closets, or enterprise network rooms . Compact ODFs help maintain network reliability by protecting fibers from physical damage, dust, and environmental factors while supporting high-density fiber connections.

Design and Features

- **Form Factor:** Typically available in 19-inch rack-mountable 1U units, wall-mountable panels, or mini ODF versions .
- **Construction:** Made from high-quality steel sheets (1.0–1.2 mm) with a solid, aesthetic finish, often in RAL 7035 (light grey) or RAL 9005 (black) glossy colors .
- **Capacity:** Can accommodate up to 288 fiber connections depending on the model, using modular cassettes or frames .
- **Cable Management:** Features embossed cable routing paths, integrated pigtail organizers, and outlets for cable glands (M16, M20) to maintain neat and functional fiber layouts .
- **Modularity:** Supports DIN24 cassettes or FiberQuick pre-terminated systems, allo...
