

Components of a Temporary Distribution Box

Overview

These specialized units are engineered cabinets designed to safely divide main generator or grid electrical feeds. They house vital active protective components, including main circuit breakers, industrial-grade sockets, and emergency stop mechanisms. The temporary power distribution box is a power distribution device designed for short-term power consumption scenarios. This device safely takes power from a single source, such as a generator or temporary utility service, and divides it into. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. WIV DISTRIBUTION BOXES MAXIMUM FLEXIBILITY + MOBILITY.
