

Composition of the distribution box in the residential unit

Overview

A distribution box uses MCBs, RCDs, and busbars to protect circuits, prevent shocks, and ensure safe power distribution in homes and buildings. You use a distribution box to divide electrical power into smaller circuits. This box keeps your home or building safe from electrical. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. The. Every wire in your home — every socket, every light, every appliance circuit — traces back to a single grey box on the wall: the distribution board, also called a consumer unit or, in older installations, a fuse box. Inside, you'll find parts like circuit breakers and fuses that protect the system from problems like overloads and short circuits. We also highlight how reliable manufacturers like NUOMAK support stable, compliant, and cost-effective power distribution.
