

Concealed electrical distribution box rails

AI Overview

Concealed electrical distribution boxes with DIN rails provide organized, secure, and space-efficient mounting for circuit breakers and other electrical components.

Overview

A concealed distribution box is designed to be installed flush within walls or panels, keeping electrical components hidden while maintaining accessibility. These boxes typically include DIN rails, which are standardized metal rails (commonly 35mm) used to mount circuit breakers, relays, and other modular devices securely and efficiently .

Key Features

- **DIN Rail Mounting:** Most concealed boxes come with a 35mm DIN rail, allowing easy installation and rearrangement of electrical components without cutting wires .
- **Capacity:** Boxes are available in various sizes, typically supporting 2 to 36 ways, depending on the number of circuits required .
- **Materials:** Shells are made from stainless steel or durable plastic, providing protection against environmental factors and mechanical damage .
- **Concealed Design:** The front cover, often white or minimalistic, blends with interior décor while allowing access for maintenance .
- **IP Rating:** Some models, like the EKDB7, offer IP65 protection, making them suitable for indoor and outdoor installations .
