

Configuration of South Korean Fiber Optic Data Switch

Overview

The switch is offered in a 1x4 to 1x36 configuration. It can be customized with 2 independent optical switches in one rack mount. The standard units are configured with 9/125 μm SM fiber for broad operating wavelengths covering 1250 nm to 1670 nm. The South Korean mechanical fiber optic switch market has demonstrated consistent growth driven by escalating demand from telecommunications, data center infrastructure, and industrial automation sectors. As of recent assessments, the market valuation exceeds several hundred million USD, with a Cisco MDS 9124V 64-Gbps 24-Port Fibre Channel switch bringing the latest high-performance, low-latency Fibre Channel Storage Area Network (SAN) technology to market. Along with the higher bandwidth, the Cisco MDS 9124V switch supports ease of configuration and management, detailed and in-depth. Connects 10/100Base-TX (UTP) networks to 100Base-FX (fiber optic) networks. Transparent to the ally data service providers, the ability to control or limit bandwidth. Other options are also available upon request. OZ Optics now offers turnkey rack mountable optical switches with built-in electronics and color touch screen.
