

Connect the socket directly to the distribution box

AI Overview

To connect a socket to a distribution box, wire the socket to the appropriate MCB in the distribution box, ensuring correct phase, neutral, and earth connections while following safety protocols.

Step 1: Safety First

Before starting, turn off the main power supply to prevent electrical shock. Use a voltage tester to confirm that the circuit is de-energized. Ensure you have insulated tools, wire strippers, and a multimeter for testing connections .

Step 2: Prepare the Distribution Box

- Identify the Main MCB (double-pole for single-phase systems) and the RCCB if installed.
- Connect the incoming phase (live) and neutral wires from the main supply to the input terminals of the Main MCB.
- Connect the output of the Main MCB to the RCCB input if present.
- From the RCCB output, connect the phase wire to the input of the socket's MCB (single-pole for standard sockets) and the neutral wire to the neutral bus bar.
- Connect the earth wire from the supply or earth pit to the earth bus bar in the distribution box .

Step 3: Wiring the Socket

- Strip about 2 cm of insulation from the phase (live), neutral, and earth wires....
