

Construction of Fire-Resistant Cable Trays in Benin

AI Overview

Fire-resistant cable trays in Benin are constructed using coated steel or epoxy-prefabricated trays, installed with precise fireproofing measures to protect critical power and signal cables.

Materials and Tray Types

For fire-resistant applications, steel trays coated with epoxy or fireproof paint are commonly used. The Benarx Epoxy Cable Tray is a prefabricated solution made of perforated steel plates coated with epoxy on both sides, designed to withstand mechanical impacts and maintain cable integrity during a fire . Other options include galvanized steel, stainless steel, aluminum, or fiberglass-reinforced plastic trays, selected based on indoor/outdoor use, humidity, and corrosive conditions . Tray width and thickness should match the number and weight of cables to ensure mechanical strength .

Installation Guidelines

Proper installation is critical for fire resistance:

- **Route Planning:** Align trays with the building structure, avoiding unnecessary crossings and detours. Segregate power and signal cables to reduce interference .
- **Support and Alignment:** Horizontal deviation should not exceed 2mm per meter, and vertical deviation should be ≤ 3 mm per meter. Trays must be level, plumb, and...
