

Converting Telecom Broadband to Fiber Optic Router

AI Overview

To switch from traditional broadband to fiber optic internet, you need an Optical Network Terminal (ONT) installed by your ISP, and a compatible router connected via Ethernet.

Understanding Fiber Internet and ONT

Fiber internet transmits data using light signals through thin glass or plastic strands, offering faster speeds, lower latency, and higher reliability compared to DSL or cable broadband . Unlike traditional broadband, fiber does not use a standard modem. Instead, an Optical Network Terminal (ONT) is required. The ONT converts the fiber optic light signals into electrical Ethernet signals that your router and devices can use . Your ISP typically provides and installs the ONT, so you do not need to purchase one yourself .

Router Compatibility

Once the ONT is installed, you can connect a router to it using an Ethernet cable. Key points for router compatibility include :

- Gigabit Ethernet WAN port: Essential for handling high-speed fiber connections.
- Speed support: Ensure the router can handle the maximum speed of your fiber plan, especially if it exceeds 1 Gbps.
- Wi-Fi standard: Modern Wi-Fi 6 routers are recommended for optimal performance...
