

Correct way to connect optical fiber cables

AI Overview

To connect optical fiber cables, you must use an Optical Network Terminal (ONT) to convert light signals to electrical signals, then link the ONT to your router using proper connectors and cables.

Key Components and Tools

- Fiber Optic Cable: Single-mode for long distances, multi-mode for shorter distances with higher data rates .
- Optical Network Terminal (ONT): Converts optical signals into electrical signals for your devices .
- Router: Must support fiber input or connect via Ethernet from the ONT .
- Connectors: Common types include SC/APC, SC/UPC, LC, and ST; choose based on compatibility .
- Tools: Cleaver for precise fiber cutting, fusion splicer for permanent joins, cleaning kits, gloves, and safety glasses .

Step-by-Step Connection Process

- Prepare the Environment: Ensure a clean, dust-free workspace to prevent contamination of fiber ends .
- Inspect and Clean: Remove dust caps from the fiber cable and ONT port. Clean connectors with specialized tools to avoid signal loss .
- Connect Fiber to ONT: Align the connector key or tab with the ONT port and push until it clicks securely
