

Cost of optical fiber compression

AI Overview

The cost of optical fiber compression, including splicing and termination, typically ranges from \$1 to \$6 per foot for materials, with labor and installation adding significantly to total project costs.

Material Costs

Optical fiber cables vary in price depending on type and strand count. Single-mode fiber is generally less expensive per foot than multimode fiber but requires more specialized equipment for compression or splicing. Material costs for fiber optic cables range from \$0.09 to \$1.52 per foot for bulk purchases or \$1 to \$6 per foot at retail, with higher counts and pre-terminated assemblies costing more. A simple 1-core FTTH drop cable may cost around \$0.13 per foot, while a 288-strand backbone cable can reach \$6 per foot.

Labor and Installation Costs

Labor is a major component of optical fiber compression costs. Splicing, terminating, and testing fiber requires skilled technicians, with rates varying by region and project complexity. Indoor installations are generally less expensive, while outdoor deployments, especially those requiring trenching or conduit, can significantly increase costs. Civil works for fiber installation in Europe, for example, range from €10 per metre for overhead deployment to €85 per metre for conventional trenching, with shallow-depth trenching around €45 per metre.
