

Distribution Box Node Price

AI Overview

Distribution box node prices vary widely depending on type, capacity, and features, typically ranging from \$50 for basic units to several hundred dollars for advanced or high-capacity models.

Price Overview

The cost of a distribution box or distribution node depends on several factors including voltage rating, amperage capacity, number of circuits, material, and integrated safety or monitoring features . Standard residential units may start around \$50-\$150, while commercial or industrial-grade boxes with higher durability, multiple circuits, or smart monitoring capabilities can cost \$300-\$1,000 or more . Outdoor-rated or weather-resistant enclosures generally carry a premium compared to indoor units . For fiber optic distribution nodes used in FTTH networks, prices vary based on the number of drop cables and pre-installed components. For example, aerial distribution nodes with a 1x8 PLC splitter and support for up to 24 drop cables are designed for rapid deployment and secure connectivity, with pricing typically in the \$100-\$400 range per unit, depending on pre-termination and customization . Larger nodes supporting 24-48 drop cables or multiple splitters can cost significantly more .

Factors Affecting Price

- Capacity and Ports: More circuits or drop cable connections increase cost .
- Material and Durability: Outdoor-rated, impact-resistant, or tamper-proof housings are more expensive .
- Pre-installed Components: Nodes with splitters, connectors, or pre-terminated cab...
