

Distribution Box ggd Power Distribution Level

AI Overview

GGD low-voltage distribution cabinets are designed for AC systems up to 380-660V with rated currents up to 3150A, suitable for industrial and commercial power distribution.

Overview

GGD cabinets are fixed-type low-voltage switchgear assemblies used for power distribution, control, and protection in industrial, commercial, and utility environments. They operate on AC 50/60 Hz systems and are designed to safely manage electricity from the main supply to multiple sub-circuits, ensuring reliable energy flow and system protection .

Power Distribution Level

- Rated Voltage: Typically 380V-415V, with some models supporting up to 660V .
- Rated Current: Up to 3150A, suitable for distribution transformers of 2000 kVA and below .
- Short-Circuit Capacity: High breaking capacity to handle overloads and short circuits, ensuring system stability .

Structural and Functional Features

- Fixed-frame design: Constructed from heavy-duty steel for rigidity, thermal dissip...
