

Distribution box circuit lighting

Overview

Electrical lighting distribution boxes, also known as lighting control panels or lighting distribution boards, are specialized enclosures designed to house and protect electrical components that control and distribute power to lighting circuits. The distribution fuse box forms the heart of every electrical system and ensures that lighting systems can be operated safely, efficiently and in accordance with standards. It protects cables and devices from overload, disconnects circuits in the event of a fault and thus guarantees maximum safety. A distribution board (also known as panelboard, circuit breaker panel, breaker panel, circuit breaker, electric panel, fuse box or DB box) is a component of an electricity supply system that divides an electrical power feed into subsidiary circuits while providing a protective fuse or circuit. Electrical lighting distribution boxes play a crucial role in managing and distributing power for various lighting systems. SMART DISTRIBUTION BOXES FOR FLEXIBLE BUILDINGS.
