

Distribution box current card

AI Overview

A distribution box current card is a visual interface that displays real-time current flow from a distribution box to various circuits, helping monitor and manage electrical loads efficiently.

Overview

A distribution box (DB box) is the central hub of an electrical system, distributing power from a main supply to multiple circuits while protecting each with circuit breakers or fuses. Monitoring the current in each circuit is crucial for safety, energy management, and preventing overloads. A current card is a digital or graphical tool that visualizes this flow. It shows how much current is being drawn by each circuit or source, such as solar panels, grid supply, or home batteries. Unlike energy meters that track cumulative energy over time, a current card focuses on instantaneous current values, making it ideal for real-time monitoring.

Features

- Real-time visualization: Displays current flow from the main supply to individual circuits.
- Customizable display: Users can configure which circuits or sources are shown and how they are represented.
- Integration with smart systems: Can be connected to home automation platforms like Home Assistant for remote monitoring and control.
- Safety monitoring: Helps detect overloads or abnormal current, reducing the risk of electrical hazards....
