

Distribution box specifications Level 3 and Level 2

AI Overview

Level 2 distribution boxes provide intermediate protection and power distribution, while Level 3 boxes serve as the final junction point for individual electrical appliances with full leakage protection.

Level 2 Distribution Box

Purpose and Function: Level 2 distribution boxes act as an intermediate distribution point under the main distribution box. They provide two-level protection, including leakage protection, and ensure that each switch controls only one electrical device, following the principle of "one machine, one switch, one leakage, one box, one lock" .

Construction and Features:

- Typically features inner and outer doors with a spray-painted exterior for safety and aesthetics .
 - Rainproof tops make them suitable for outdoor use .
 - Busbars are usually made of copper for good conductivity and contact .
 - Can include measuring systems for monitoring electrical parameters .
 - Designed according to construction electricity standards and can accommodate multiple outgoing feeders with MCCBs for protection .
- Applications:**
- Used in construction sites or industrial projects where intermediate distribution and safety are required.
 - Provides a platform for installing switches, circuit breakers, and other protective devices before the final distribution to appliances
