

Does bending the pigtail at a 90-degree angle have any impact

Overview

When RJ45 connectors are installed at sharp angles, such as 90 degrees, the cable can bend too much, leading to signal degradation. The NFPA defines the regulator connection (pigtail) between the tank and regulator as a flexible connector. The primary reason for this 36 inch maximum length. The mounting angle refers to how the RJ45 connector is oriented when it's plugged into a network device—whether it's a router, switch, or patch panel—or in the cable assembly itself. In residential and commercial electrical and RF projects, space constraints are the most common cause of installation failure. You see it in sheet-metal brackets, copper plumbing elbows, steel reinforcement cages, wire forms, and CNC-bent tubing on bicycles. fiber core pitch and 2000hours reliability qualified.
