

Does the switch have built-in fiber optic cable

AI Overview

Most network switches do not come with fiber optic cables; these cables and SFP modules are usually sold separately.

Fiber Optic Switch Overview

A fiber optic switch is either a Fibre Channel (FC) switch for storage networks or an Ethernet switch with fiber ports for LAN, WAN, or data center networks. These switches have SFP (Small Form-factor Pluggable) or SFP+ slots that require compatible fiber optic transceivers to connect fiber cables. The switch itself typically includes only the hardware and electrical ports, not the fiber cables or SFP modules.

Why Fiber Cables Are Not Included

Fiber optic connections require specific types of cables depending on distance and network speed:

- Multimode fiber: For short distances (under 1000 feet), usually with 850nm wavelength.
- Single-mode fiber: For long distances (over 1000 feet), typically 1310nm or 1550nm wavelength. Each SFP module requires duplex fiber cables (two strands) with LC connectors, and the type of fiber must match the SFP module. Because network setups vary widely, manufacturers generally do not include fiber cables to allow users to select the correct type and length for their specific installation....
