

Dominic cable trays are installed quickly

AI Overview

Dominic cable trays can be installed quickly due to their modular design, accessible routing, and innovative connection systems like Hermi® Fast Joint.

Modular and Accessible Design

Cable trays, including Dominic systems, are designed to support and organize cables efficiently in both indoor and outdoor environments. Their open or ventilated structures allow cables to be laid out rapidly, with easy access for maintenance, additions, or removal of cables, which significantly reduces installation time compared to conduit systems that require individual runs and fittings (Dura-Line) . Trays can be mounted on ceilings, walls, or floors, and their modular components—such as horizontal and vertical bends, T-pieces, and crossovers—enable flexible routing without complex modifications (OBO CMS) .

Material and Structural Benefits

Dominic cable trays are typically made from steel, aluminum, or FRP, with finishes like galvanization or anodization to resist corrosion. These materials are lightweight yet strong, allowing installers to handle and position trays quickly while maintaining structural integrity (ABB Technical Guide) . Pre-fabricated lengths and fittings reduce the need for on-site cutting or welding, further speeding up installation.
