

Enterprise-level switches and industrial-level switches

Overview

Industrial-grade switches are mainly used in industrial automation, intelligent manufacturing, energy monitoring and other industrial fields, and need to operate stably for a long time in extreme harsh environments, emphasizing durability, protection and real-time communication. Industrial-grade switches are mainly used in industrial automation, intelligent manufacturing, energy monitoring and other industrial fields, and need to operate stably for a long time in extreme harsh environments, emphasizing durability, protection and real-time communication. Industrial-grade switches and enterprise-class switches both play an important role in network infrastructure, but they have significant differences in design and functionality. The following is a deep analysis of the differences between these two types of switches: 1. Design Concept and Purpose. Industrial switches must be specifically designed for the task at hand or they will fail, as this plant manager discovered. And with solutions rated as Challenger and Visionary by Gartner, Huawei will take you to the next level. If your deployment involves extreme temperatures, dust, vibration, DC power, outdoor cabinets, or higher uptime risk, an industrial.
