

FRP optical cable reinforcing core for sale

AI Overview

FRP optical cable reinforcing cores are available in various diameters and lengths, offering high tensile strength, corrosion resistance, and non-metallic reinforcement for fiber optic cables.

Product Overview

FRP (Fiber Reinforced Plastic) cores serve as the central strength member in optical cables, providing structural support, tensile strength, and bending resistance while remaining lightweight and non-conductive. They are ideal for environments where metal components are unsuitable, offering resistance to lightning, electromagnetic interference, corrosion, and rodent or insect damage. FRP cores are typically made from glass fiber reinforced with resin, cured and extruded to precise diameters for consistent performance.

Specifications and Stock Options

- Diameter Range: 0.4 mm to 5.0 mm, with standard delivery lengths of 18–25 km depending on size.
- Core Types: Central FRP reinforced loose tube, subunit optical fiber cables, and rods for customized applications.
- Reinforcement Features: High tensile strength, low extension rate, lightweight (~1/4 the density of steel), and smooth surface for easy processing.
- Outer Sheath Compatibility: PVC or LSZH jackets for flame retardancy and environmental protection.
- Multi-Core Support: Available for 48–144 fiber cores, suitable for high-capacity opt...
