

Fiber Optic Cold Joint SC

AI Overview

SC cold connectors enable fast, tool-free fiber optic connections using mechanical splicing without heat or fusion, ideal for FTTH and telecom networks.

Overview

An SC cold joint or SC cold connector is a type of fiber optic connector that allows two fibers to be joined mechanically rather than through traditional fusion splicing. These connectors use a pre-installed index-matching gel or mechanical clamping to align the bare fiber with a short fiber stub inside the connector body, enabling optical signal transmission with minimal insertion loss and backreflection . The SC (Subscriber Connector) type features a square body with a push-pull latch, providing simple plug-in operation and good mechanical stability .

Key Features

- Quick and tool-free installation: Cold connectors eliminate the need for heat or fusion splicing equipment, reducing installation time and cost .
- Carrier-grade SC port: Ensures secure and stable connections suitable for both indoor and outdoor deployments .
- Durable materials: Many SC cold connectors, such as the Boyan BY-LJZ-01, use embedded PEI material for environmental resistance and long-term reliability .
- Low insertion loss and return loss: High-quality SC cold connectors provide low signal attenuation and minimal light reflection, with SC/APC connectors achieving return loss $\geq 60\text{dB}$.
- Compatibility: Works with standard single-mode fiber optic cables and is widely us...
