

Fiber Optic Cold-Pressed Terminal Connector sc

AI Overview

A cold-pressed fiber optic connector, also called a mechanical or fast connector, terminates fiber cables without fusion splicing using mechanical alignment or index-matching gel.

Overview

Cold-pressed terminals, or mechanical splice connectors, are field-installable fiber optic connectors that allow quick termination of optical fibers without a fusion splicer. They work by aligning the bare fiber with a short fiber stub inside the connector body using mechanical clamping or pre-installed index-matching gel, enabling efficient optical signal transmission. These connectors are widely used in FTTH deployments, emergency repairs, and small-scale installations due to their fast installation and lower tool cost compared to fusion splicing.

Types and Performance

- SC/APC Cold Connectors: Feature an 8-degree angled endface polish, providing return loss ≥ 60 dB, making them ideal for GPON, EPON, and CATV networks where low back reflection is critical. The green housing follows industry-standard APC color coding.
- SC/UPC Cold Connectors: Use ultra-physical contact polish with return loss ≥ 50 dB, suitable for general-purpose fiber terminations where back reflection is less critical
