

Fiber Optic Gateway Box for Chilean Apartment Unit

AI Overview

For a Chilean apartment unit, a compact indoor fiber termination box or wall-mounted FTTH enclosure is ideal, supporting 1-2 fibers with SC or LC connectors and easy installation.

Recommended Fiber Termination Solutions

For single apartment units (SDU), the following options are suitable:

- Indoor wall-mounted termination boxes: Compact and robust, these boxes accommodate 1-2 fibers, support SC or LC connectors, and allow direct termination or fusion/mechanical splicing. They provide integrated space for splice protectors and fiber slack storage, ensuring proper bend radius and preventing signal degradation (Unisol Indoor Fiber Termination Box) .
- Wall outlet-type termination plates: Flush-mounted wall plates with LC adapters and crimp splices are ideal for integrating fiber directly into the apartment's interior, offering a clean aesthetic and easy access for maintenance . For multi-dwelling units (MDU) or buildings with multiple apartments:
- Floor-level or corridor-mounted distribution boxes: These enclosures can handle 8, 16, or 24 cores, support PLC splitters (1×4, 1×8, 1×16), and allow multiple subscriber connections per floor. They are designed for easy expansion, re-routing, and maintenance, which is essential in shared risers or telecom closets .
- IP-rated boxes: For basements or areas prone to moisture, IP65-rated boxes provide dust and water protection while maintaining organized fiber management
