

Fiber Optic KVM Agent Collaboration Solution

AI Overview

A Fiber Optic KVM Agent Collaboration Solution enables high-performance, low-latency remote access and control of multiple PCs over fiber, supporting 4K video, seamless switching, and collaborative operations in control rooms and mission-critical environments.

Overview

Fiber Optic KVM (Keyboard, Video, Mouse) collaboration systems allow operators to remotely access and control multiple computers from a centralized or distributed workspace. These systems are ideal for control rooms, transportation operations centers, energy facilities, aviation command centers, and emergency operations centers. They combine KVM matrix switching, extenders, and video wall control into a single scalable solution, providing pixel-perfect 4K video, near-zero latency, and full redundancy for continuous operation .

Key Features

- **Distributed and Scalable Architecture:** Systems like AVCiT Phinx-288 allow configuration as a KVM matrix, KVM switch, KVM extender, or video wall controller, supporting up to 288 ports and 24 slots for fiber optic I/O or video wall modules .
- **High-Quality Video Transmission:** Supports 4K@60Hz 4:4:4 chroma with uncompressed image quality, ensuring seamless switching without black screens or re-synchronization
