

Fiber Optic Patch Cord Classification and Coding

Overview

According to different transmission distances and bandwidth requirements, the products are divided into two categories: single-mode (OS2) and multi-mode (OM2, OM3, OM4, OM5), supporting high-speed network transmission from 1G to 400G/800G. At ZION Communication, we design and manufacture a full range of fiber patch cords for: This guide will help you quickly understand the main types of fiber patch cords and how to choose the right solution for your project – and how ZION can support you with stable quality, flexible customization. Fiber optic patch cords, also known as fiber optic patch cables or fiber jumpers, are indispensable components in modern optical networks. They act as the critical link for interconnecting devices like optical switches, servers, and distribution frames. It is mainly used in applications such as optical fiber communication systems, optical fiber access networks, optical fiber data transmission networks, and local area networks.
