

# Fiber Optic Splitter Box Hanging Height

## AI Overview

Fiber optic splitter boxes are typically mounted at a height of 1.5 to 2 meters (5 to 6.5 feet) above the floor for easy access and maintenance.

### Recommended Hanging Height

For indoor installations, such as in a building's utility room, weak current well, or floor wiring box, the splitter box should be mounted at a height that allows technicians to comfortably access the box for splicing, maintenance, and inspection. Industry practice generally places the box between 1.5 meters (5 feet) and 2 meters (6.5 feet) above the floor. This height ensures:

- Ergonomic access for technicians without the need for ladders or bending.
- Protection from accidental damage by occupants or equipment.
- Compliance with standard cable routing and slack management requirements . For outdoor installations, such as on walls or poles, the height may vary depending on local regulations and environmental factors. Outdoor boxes are often mounted at least 2 meters (6.5 feet) above ground to prevent tampering, flooding, or accidental impact .

### Additional Installation Considerations

- Wall Mounting: Ensure the box is securely fastened to a solid surface using appropriate anchors or brackets.
- Cable Management: Leave sufficient space for fiber slack, splicing trays, and routing of incoming and outgoing fibers ....
