

Fiber Optic Two-Core Patch Cord

AI Overview

A Fiber Optic Two-Core Patch Cord is a cable assembly containing two optical fibers, designed to connect network devices while ensuring high signal integrity and durability.

Overview

A two-core fiber optic patch cord integrates two optical fibers within a single cable, allowing simultaneous transmission of data in both directions or connecting two separate channels in a network . These cords are commonly used to link patch panels, switches, and peripheral equipment, providing a reliable bridge for optical signals .

Types

- Single-Mode (SM): Optimized for long-distance communication with minimal signal loss, typically using OS1/OS2 standards .
- Multimode (MM): Suitable for shorter distances, supporting OM1 to OM5 standards for high-speed data transmission .
- Armored: Features a steel tape armor and high-strength aramid yarn for enhanced protection against physical stress, crushing, UV exposure, and bending, making it ideal for harsh environments or building-integrated wiring .
- Uniboot/Dual-Core: Combines two fibers into a single 2.0mm or 3.0mm cable, improving cable management and reducing clutter in high-density installations .
