

Fiber optic SC to LC multimode

AI Overview

SC to LC multimode fiber connections allow seamless linking of SC and LC fiber networks, supporting high-speed data transmission over short distances.

Overview

SC to LC multimode fiber solutions are used to connect networks with different connector types, enabling compatibility between SC-configured environments and LC-configured devices. These connections are commonly used in data centers, server rooms, and telecommunications setups where multimode fiber is preferred for short-distance, high-bandwidth applications .

Cable Options

- Duplex Multimode Cables: These cables feature dual SC connectors on one end and dual LC connectors on the other, allowing full bidirectional data transmission without additional conversion steps. Typical fiber type is 62.5/125 μm , often encased in an orange jacket for multimode identification .
- Simplex Cables: Single-fiber cables with SC to LC connectors are also available for applications requiring only one-way transmission or lower density setups .

Adapter Options

- Hybrid Adapters: SC to LC hybrid adapters are available in male-to-female or female-to-female configurations, using precision ceramic or polymer alignment sleeves to ensure low insertion loss and reliable ferrule mating
