

Fiber optic adapter SCAPC

AI Overview

An SC/APC fiber optic adapter is a precision component used to connect two SC connectors with angled physical contact, ensuring low insertion loss and high return loss in single-mode optical networks.

Overview

An SC/APC adapter is a passive mechanical interface that joins two SC connectors with angled physical contact (APC) ferrules, typically polished at an 8° angle. The adapter contains a precision alignment sleeve, often made of zirconia ceramic, which keeps the fiber cores perfectly aligned to minimize optical loss. The green color of the adapter indicates APC compatibility, distinguishing it from SC/UPC (blue) or multimode connectors (beige or aqua) .

Key Features

- Low Insertion Loss: Ensures minimal signal attenuation when connecting fibers.
- High Return Loss: APC design reduces back reflection, typically ≥ 60 dB, making it ideal for analog CATV, PON, and FTTH networks .
- Durable Housing: Usually made of plastic or metal, compact and lightweight for easy installation in patch panels, wall-mounted enclosures, or fiber distribution frames .
- Duplex or Simplex Options: Available in single-mode simplex or duplex configurations for flexible network design .
