

Fiber optic broadband connected to router speed

AI Overview

Fiber optic internet can deliver speeds up to 5 Gbps, but achieving these speeds depends on using a high-performance router and proper network setup.

Maximum Speeds and Router Requirements

Fiber optic internet is the fastest broadband available, offering symmetrical upload and download speeds that can reach up to 5 Gbps for premium plans . To fully utilize these speeds, your router must support multi-gigabit connections, have a fast processor, and ideally use Wi-Fi 6 or Wi-Fi 7 standards . Older routers or those with only 100 Mbps WAN ports will create a bottleneck, preventing you from reaching your fiber plan's full potential .

Wired vs Wireless Performance

For the fastest and most stable speeds, a wired Ethernet connection is recommended. Using a Cat6 or higher cable directly from your router or ONT to your device ensures you can achieve near the full fiber speed . Wireless connections are affected by distance, walls, interference, and device capabilities. Even with Wi-Fi 6 or 7, real-world speeds are often lower than the theoretical maximum, but still sufficient for 4K/8K streaming, gaming, and video conferencing .
